

The Website & SEO Launch Checklist

40 things Wizhy Studio checks before any client site goes live — use it to audit your own site.

1. Technical Foundation

- SSL / HTTPS enabled site-wide, no mixed-content warnings
- Site loads correctly on Chrome, Safari, Firefox and Edge
- Mobile-responsive on phone, tablet and desktop breakpoints
- Custom 404 error page exists and links back to the homepage
- robots.txt is present and not accidentally blocking the whole site
- XML sitemap.xml exists and is submitted to Google Search Console
- Canonical tags set correctly on every page (no duplicate-content issues)
- Favicon displays correctly in browser tabs and bookmarks

2. Performance

- Images compressed and served in modern formats (WebP/AVIF where possible)
- Core Web Vitals (LCP, CLS, INP) checked in Google PageSpeed Insights
- Fonts are self-hosted or preloaded to avoid render-blocking
- Unused CSS/JS removed or deferred
- Caching and a CDN configured for static assets
- Page weight kept as lean as possible for the content it delivers

3. On-Page SEO

- Unique, keyword-relevant tag on every page
- Unique meta description on every page (under ~160 characters)
- One clear H1 per page, with a logical H2/H3 hierarchy beneath it
- Alt text written for every meaningful image
- Internal links connect related pages to spread authority
- URLs are short, readable and keyword-relevant (no cryptic query strings)
- Open Graph and Twitter Card tags set for clean social share previews

4. Structured Data & Discoverability

- JSON-LD structured data added (Organization / LocalBusiness / Product, as relevant)
- Google Search Console verified and connected
- Google Business Profile claimed and linked (for local businesses)

- Breadcrumbs implemented where the site structure benefits from them

5. Conversion & Trust

- Primary call-to-action visible above the fold on every key page
- Contact information (phone, email, WhatsApp) easy to find on every page
- Contact form tested end-to-end, including validation and error states
- Testimonials / reviews / social proof visible near key decision points
- Privacy Policy and Terms pages exist and are linked in the footer
- Cookie consent banner shown before any non-essential tracking loads

6. Accessibility

- Sufficient color contrast between text and background in both light & dark themes
- All interactive elements reachable and operable via keyboard alone
- Meaningful alt text and ARIA labels on icons/buttons that lack visible text
- A 'skip to main content' link provided for keyboard/screen-reader users
- Animations respect the prefers-reduced-motion setting

7. Security & Maintenance

- CMS/plugins/dependencies kept up to date
- Automated backups configured and tested (restore, not just backup)
- Uptime monitoring configured with alerting
- A clear process exists for who updates content after launch

8. Analytics & Ongoing Growth

- Analytics installed only after cookie consent is granted
- Goals/conversions configured (form submits, calls, WhatsApp clicks)
- A monthly review cadence set for rankings, traffic and conversion rate
